

WorkTime® - A Powerful Computer Monitoring System

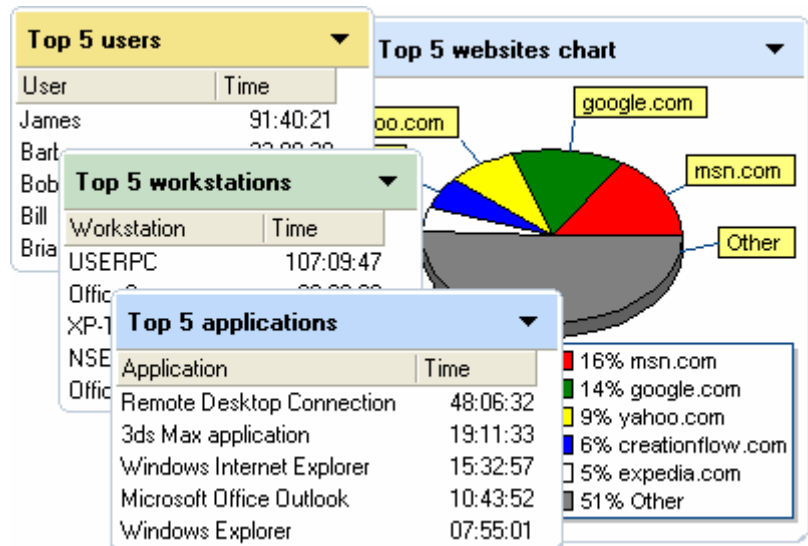

WorkTime® Corporate is an employee and computer monitoring system. Reliable and powerful, designed to monitor sites with more than 1000 workstations/users. The system is **field-tested**.

Tasks Solved with WorkTime

- ✓ Internet usage monitoring
- ✓ Computer usage monitoring
- ✓ Employee monitoring
- ✓ Software usage monitoring
- ✓ Terminal Services and Citrix

Why WorkTime

- ✓ Designed for heavy loads
- ✓ Field-tested on sites with more than 1000 user connections
- ✓ Created to monitor, but not to spy
- ✓ Customizable
- ✓ Covers all corporate monitoring needs
- ✓ Competitive prices

How it works

Automatic invisible monitoring
 Monitoring is performed in the background and is completely invisible to the employee. It automatically records employee activities in one centralized location.

Reporting system
 WorkTime proposes powerful and highly customizable reports designed for large volumes of information. Custom reports are available to suit client's needs exactly.

Reliability & performance
 WorkTime is designed specifically for heavy loads numbering in the hundreds and thousands of clients. WorkTime is optimized in such a way that it requires very little system resources and to process large volumes of information.

Licensing and fees

WorkTime® is software, installed on customer's computers. WorkTime is licensed per seat (per tracking client). There is a one time license fee and no monthly charges. The license includes one year of technical support and upgrades to all new WorkTime versions. Once purchased the license never expires and can be used without any additional charges. Prices information: <http://www.nestersoft.com/worktime/register.shtml>

What is recorded
 WorkTime records time and duration of computer related activities: application and documents, web-sites/URL visits.

Monitoring, but not spying
 WorkTime is strictly monitoring software. It does not support any spying functionality that may infringe on employees' privacy. It does not record screens, keystrokes, emails or chats content.

System, network, Terminal Services/Citrix
 WorkTime is a client-server system developed to monitor computer usage in a local or distributed network. Monitoring under Windows Terminal Services (Remote Desktop Services) and Citrix Server (Citrix XenApp, Citrix MetaFrame Server, Citrix Presentation Server) is supported.
